

Saved Scenario Outputs

Generated with `node scripts/run_evaluation.mjs` against workflow engine version `phase3-v1.2`.

This file is meant to function as a **Track B evidence index**: each case below links one workflow branch to exported evidence that a reviewer can inspect quickly.

P3-01 — baseline

- **Branch type:** happy path + acceptance
- **Final protocol state:** completed
- **Why it matters for Track B:** Shows the full Track B interaction loop with visible handoffs, reviewed output, and completion.
- **Screenshot:** docs/screenshots/01_home.png

P3-02 — clarification

- **Branch type:** clarification stop
- **Final protocol state:** awaiting clarification
- **Why it matters for Track B:** Shows that the system pauses and asks for more information instead of guessing under ambiguity, then can resume after clarification.
- **Screenshot:** docs/screenshots/02_clarification.png

P3-03 — prioritization

- **Branch type:** human escalation
 - **Final protocol state:** awaiting prioritization
 - **Why it matters for Track B:** Shows a visible human-in-the-loop checkpoint for unresolved tradeoffs, then can resume after the user revises priorities.
 - **Screenshot:** docs/screenshots/04_prioritization.png
-

P3-04 — medicalBoundary

- **Branch type:** safety boundary
 - **Final protocol state:** stopped boundary
 - **Why it matters for Track B:** Shows bounded autonomy through a visible non-clinical stop condition.
 - **Screenshot:** docs/screenshots/03_boundary_stop.png
-

P3-05 — uncertainty

- **Branch type:** missing-info uncertainty
 - **Final protocol state:** awaiting clarification
 - **Why it matters for Track B:** Shows refusal to overclaim confidence when key planning fields are still missing.
 - **Screenshot:** docs/screenshots/06_uncertainty.png
-

P3-06 — adaptation

- **Branch type:** demonstrated adaptation
 - **Final protocol state:** awaiting user acceptance
 - **Why it matters for Track B:** Shows state-preserving revision after an accepted plan is reopened by structured post-acceptance execution feedback.
 - **Screenshot:** docs/screenshots/05_adaptation.png
-

P3-07 — revision

- **Branch type:** bounded user revision
 - **Final protocol state:** completed
 - **Why it matters for Track B:** Shows one more visible human decision before final acceptance rather than immediate completion.
 - **Screenshot:** docs/screenshots/07_state_and_transitions.png
-

Each case has a corresponding JSON artifact in `outputs/sample_runs/`.

Additional continuation evidence

- `outputs/exported_artifacts/clarification_resume_demo.json` shows a paused clarification session resumed with updated intake.
- `outputs/exported_artifacts/prioritization_resume_demo.json` shows a paused prioritization session resumed after the user revises the intake.
- `outputs/demo_outputs/end_to_end_trace_baseline.md` walks one full baseline run step by step with agent authority and transition authorization visible.
- `outputs/exported_artifacts/extended_evaluation_snapshot.json` links the adversarial and persona-variation cases that go beyond the deterministic core suite.

Recommended reviewer path

baseline → medicalBoundary → prioritization → revision or adaptation
